Abstract (en)

[origin: EP0719634A2] The length of packaging material (P) is cut up into several strips (S) of equal width by a cutter (3). The strips are continuously moulded in steps on to a corresponding number of cylindrical moulding tubes (4), and the edges (SR) of each strip sealed lengthwise by sealed implements (7). The tubular packets are sealed transversely by transverse sealing implements (9) behind the ends of the moulding tubes. The length of packaging material is cut only after an uncut preliminary length.
