Abstract (en)

[origin: DE4447124C1] A cylinder (1) for a rotating press comprises a cylinder core (2) where: (a) journal bearings (6;7) are attached which can be loosened, and where: (b) the cylinder core is supplied with a plug (23) with a flange where its conical end engages with a conical recess (14) in each journal bearing (6;7). The plug (23) can be withdrawn so far into the cylinder core that the conical end does not engage the recess in the journal bearing (6;7).

Abstract (de)

Bei einem Zylinder (1) einer Rotationsdruckmaschine besteht die Aufgabe darin, einen Zylinderballen (2) von den Lagerzapfen (6,7) zu trennen und zwischen den Lagerzapfen herauszunehmen, wobei ein Lagerzapfen in axialer Richtung nur minimal bewegt wird. Erfindungsgemäß wird dies durch axial, in ein Inneres des Zylinderballens bewegbare Zapfen (23) erreicht. <IMAGE>
