Abstract (en)
[origin: EP0719706A1] The cardboard cut-out loading device has at least two magazines (2,3) to receive cardboard cut-outs (4,5). The cardboard cut-outs of one of the magazines (2) may have e.g. a different image printed on them to those of the other magazine. There is a grip (6), e.g. a suction cup (19), to take an individual cut-out. This grip passes the cardboard cut-outs onward in the direction of a device which makes up boxes from the cut-outs. The magazines can be moved in such a manner that each individual magazine can selectively be brought up to the grip for the cut-outs.
