Abstract (en)

[origin: EP0719711A1] An insert for a packaging, such as a jewel box is made by cutting an insert blank (12) from a base material (14). The base material includes an upper layer (16) of a compressible foamed plastic material and a lower layer (15) of an elastic foamed plastic material. The upper layer of material is compressed along a peripheral zone of the blank and is maintained in an at least partly compressed condition along the peripheral zone. Thereby, a desired domed or convex shape of the upper surface of the insert may be obtained. The peripheral edge of the insert blank (12) may be heated by a cutting tool (21) cutting the blank from the base material (14), and a film (17) of a heat sealable plastic material may be arranged between the upper and lower layers (16, 15) of material. Alternatively, the material of the upper layer (16) may be an at least partly plasticly compressible material. <IMAGE>
