Abstract (en)
[origin: EP0720132A2] A transaction terminal (2) incorporates a control means (4) for controlling the operation of the terminal. Terminal operation is monitored by a plurality of sensors (110-116) in communication with the control means (4). The control means (4) can access data characteristic of predetermined acceptable terminal operation and the outputs of said sensors (110-116) are compared with said data. The control means (4) is adapted to alter terminal operation in dependence on the output of said sensors (110-116) so as to compensate for any variation from said acceptable terminal operation. The terminal (2) also includes additional sensors (118,120) arranged to monitor ambient environmental conditions, and the control means (4) is arranged to alter terminal operation dependent on changes in the ambient environmental conditions as detected by said additional sensors (118,120). <IMAGE>
