Abstract (en)

[origin: WO9509780A1] An articles carrier (C) of the basket type for bottles comprises a base (16, 22), opposed side walls (12, 28) opposed end walls (64, 66; 88, 90) and an internal medial partition structure (74, 84; 100, 110) which incorporates an upstanding handle panel (112, 144). The carrier includes bottle cells defined, in part, by transverse partition panels (116, 118, 120; 148, 150) on both sides of the medial partition structure. The open tops of the cells are substantially closed by removable top panels (32, 44) extending between the upstanding handle panel and respective side walls of the carrier and include openings (A) through which neck portions of bottles received in the carrier are exposed to view.
