Abstract (en)

[origin: EP0721762A1] A dishwashing machine is described, comprising a fan (12) to inhale from the washing chamber of the machine the air full of steam created by the washing of the crockery, and a hollow body (7) connected to said fan (12) for favouring the condensation of the steam contained in said air. According to the invention, means (7A) are provided to bring again in circulation some of the air that has already flown at least one time in said hollow body (7), so as to practically obtain a closed air circulation circuit. <IMAGE>
