Abstract (en)
The rim (30) of the cover (7) is positively locked to the cap (8) whose own casing wall (31) has two ring-shaped inward flanges (I,II) completing a rib and groove connection with the enclosed cover (7). The cover is also underpinned from below by a rib part (23) of the cap (8) and also held from above by a second rib part (20). The cover has a number of purposely thinner piercing sectors (13) which are closed off by a cover film (15") giving an ideal tear-off line (17) between the sectors (13). The positive locking (E) between cap and cover is obtained by spraying the cap onto the cover rim (30). The flask (1) tapers towards the neck area (5) and is made of polyethylene and enclosed at the neck end by the TPE assembly (A) composed of cap (8) and complete with cannula access (12) and troughed (14) pierce points (13) with Al-foil cover film (15) and positioned cover (7). The shrinkage of the cooling film helps to reinforce the locking effect at (E).

Abstract (de)
Die Erfindung betrifft eine Anordnung (A) an Infusionsflaschen (1) oder dergleichen, mit einer mindestens einen folienabgedeckten Durchstechbereich (13) aufweisenden Decke (7), die von einer Kappe (8) gefaßt ist und schlägt zur Erzielung eines stabilen, dichten Verbundes trotz Offenlassung einer einfachen sortenreinen Entsorgung vor, daß der Randbereich (30) der Decke (7) in einem Umfassung-Formschluß-Eingriff (E) zur Kappe (8) steht. <IMAGE>
