Abstract (en)  
[origin: US5623771A] A steam moistening apparatus includes a housing with a steam connection, wherein a steam blow chamber is arranged in the housing. The steam blow chamber has an external wall in common with the housing and the external wall is provided with steam outlet openings. A distribution duct to which steam can be admitted and which is continuously surrounded by steam on all sides is arranged in the interior of the housing of the steam moistening apparatus. The distribution duct is in communication with the steam blow chamber through several supply lines which are distributed over the length of the housing.
