Abstract (en)

[origin: EP0722022A1] The frame (10) has a wall (12) which forms a closed cross section, and has one or more surfaces (20,22) on which facing elements (40) can be supported. The elements can be pressed against the surfaces by a fastening screw (28), which fits into an open channel (16) which runs along the surfaces. The width of the channel is roughly the same as the minor diameter of the thread of the screw, and the frame may have a wall thickness in the region of the channel between the crest and root radii of the thread. The screw may also be of the self-tapping type.
