Abstract (en)

[origin: WO9509696A1] The invention relates to a method for spraying a material (5), characterized in that a spraying medium is supplied to the material as a movable member (2), which is provided with outlets (4) for the spraying medium, is set in motion. The invention also relates to a device for spraying a material, characterized in that it comprises a movably arranged, movable member (2) provided with first outlets (4) for a spraying medium. Thereby, a spraying medium is given such a motion in relation to the material that the outcome of the spraying, e.g. during washing, is just as good as or better than that of the prior art, in spite of the considerably lower consumption of the medium in question. The invention also relates to a rotatably arranged nozzle.
