Abstract (en)
[origin: EP0723108A1] The other edge section of the two edge sections (36a,36b) produces the light/dark border on the counter traffic side. The two edge sections are arranged mutually displaced to each other. The shutter part (34) is adjustable between a setting for travelling on the right and a setting for travelling on the left. So that respectively in both settings, the shutter edge section which produces the light/dark border on the own traffic side, is arranged vertically lower than the other edge section, which produces the light/dark border on the counter traffic side.
