Abstract (en)

[origin: EP0723118A1] An apparatus for securing to a substrate such a radiator as has at least two somewhat spaced apart, substantially vertical surfaces, preferably a radiator which is composed of at least two radiator sections (1, 2), comprises a stand (8) which is securable in the substrate and is arranged to extend approximately vertically from the substrate and up between the vertical surfaces, a lower anchorage device (14) disposed on the stand for cooperating with a lower portion of the radiator, and an upper anchorage device (13) which is disposed on the stand above the lower anchorage device for cooperation with a portion of the radiator located over the lower portion of the radiator. According to the invention, the apparatus has an operating device (21) which extends from an actuator (22) located beneath the lower anchorage device (14) to the upper anchorage device (13); the actuator (22), the operating device (21) and the upper anchorage device (13) being functionally interconnected such that the upper anchorage device is switchable between an open position releasing the radiator and a locking position retaining the radiator under the action of the actuator. <IMAGE>
