Abstract (en)

[origin: US5798929A] A module-based apparatus for automatically processing thin sheet material is provided. The individual modules perform the tasks necessary for processing the sheet material. They are connected with one another and with a control device in such a way that data can be transmitted between all components. Additionally a safety device is provided for monitoring the data exchange among the modules themselves and between them and the control device. The safety device is in a position to prepare logs of the processing operations and to recognize manipulation of the apparatus with intent to defraud.
