Abstract (en)
[origin: DE4334857C1] The invention relates to an apparatus for core bundling with a transport device (4) acting between a removal station (1), a core-shooting machine (2) and a transfer station (3), with a bundling device (5) having at least one first manipulator (6) and adhesive application means (8) and, if required, with a coupled dipping bath (9) and a downstream drying oven (10). For rapid, automatic assembly even of complex core bundles (20) with the minimum outlay in terms of construction, the apparatus is designed in such a way that the bundling device (5) can be supplied with cores (11) from at least two core-shooting machines (20) via the transfer station (3) or that the first manipulator (6) is used to grab and deposit or stack the cores (11) and that the cores (11) can be deposited - one on top of the other - on a slide (15) or carriage. <IMAGE>
