Abstract (en)
[origin: EP0723791A1] The skis each have a lower sliding surface (8) with metallic edge strips (9,10). A reinforcing pad (11) is placed on the lower surface, above which is a core (12). On one side of the core is a large section wall (3,4) forming a reinforcement longitudinally of the ski. The maximum height point of this wall (H1) can be offset longitudinally (d) w.r.t. the transverse line of maximum thickness of the ski.
