Abstract (en)
[origin: EP0724032A1] A thread selecting device (2) for use with a weaving machine (3) is provided with a large number of thread selecting units (23,24) comprising for example a needle (4A,4B,25A,25B) that selects a thread (8) to be used by the machine (3), and a hook (6A,6B) driven by a solenoid (5) that supports the needle (4A,4B,25A,25B) in a raised position. This invention disposes adjacent solenoids (5) in a vertically staggered arrangement in the thread selecting device (2), thereby increasing the density of thread selecting units (23,24) and preventing the thread selecting device (2) from becoming bulky due to increase in the number of units. <IMAGE>
