Abstract (en)
[origin: EP0724063A1] The broad sides of the bars (1) are adjacent in the direction of movement. Their longitudinal edges interlink by round hook-shaped sectioned parts running at right angles to the casing's direction of travel. A sealing strip (10) runs along the longitudinal edges at the interlinking parts and is attached to one longitudinal edge. On the other longitudinal edge, at least when the casing is closed, the sealing strip closes the slot needed for the interlinking movement. The sealing strip consists of a folded metal strip (2) joined along its longitudinal edges.
