Abstract (en)

[origin: EP0724100A2] The valve housing (2) and the lever-type actuator (1) are made in one piece. The two parts are non-releasably connected via an elastic bending connection (5). The actuator is formed as a lever arm, and has a rib on each side with a curved recess (8) having a pivot radius. The valve housing has associated webs (9). The recess permits a movement relative to the web which corresponds to a stroke (12) of the valve tappet (4). Each recess forms a guide (14) for each web.
