Abstract (en)
The present invention provides a security enclosure for an automatic teller machine ("ATM"), which security enclosure comprises a first fixed wall part, a second movable wall part and coupling means for coupling the second wall part to the first wall part so as to allow movement of the second part relative to the first part between a retracted position in which the second wall part is nested with the first wall part, and an extended position in which the first and second wall parts together define a enlarged work area within the enclosure; characterised in that said coupling means comprises a cantilevered linear bearing for cantilevering the second wall part to the first wall part. The invention also provides an ATM installation comprising an ATM and such a security enclosure. <IMAGE>
