Abstract (en)  
[origin: EP0724273A2] The magnet arrangement (20) includes a coil housing (16) containing a superconducting coil (10). The coil is forcibly cooled, and the coil housing is vacuum-sealed. The electrical connection lead (20a,20b) of the winding (3) is separated from the cooling medium inlet and outlet (18a,18b). The coil housing is surrounded by a vacuum chamber (22) for thermal insulation, and the coil is composed of several double-pancake windings. The cooling medium is LN<sub>2</sub> or LHe, and the superconductor is made of a high T<sub>c</sub> superconducting material. The winding core (7) is made of a synthetic material, e.g. GFK or CFK.
