Abstract (en)

[origin: WO9511186A1] The invention relates to a portable dual advance dispenser (10) for a supply of lined tape material (52) having an adhesive tape (53) mounted in separable strips on a release liner (50). The dispenser includes a frame (20) for supporting a supply of lined tape material and a dispensing apparatus (12) for dispensing desired portions of the lined tape. The dispensing apparatus includes a rotatable liner dispensing member (24) which directs a portion of the liner in a different direction from the adhesive tape, a rotatable adhesive tape material dispensing apparatus (22) for dispensing the adhesive tape, a separation member (30) to separate the liner from the adhesive tape, and a drive transfer mechanism (40, 44) which causes interaction between the rotatable adhesive tape material dispensing apparatus and the rotatable liner dispensing member. If the user selects a first dispensing option, adhesive tape (53) is pulled from the adhesive tape dispensing apparatus, and the liner (50) is advanced through the liner dispensing apparatus. If the user selects a second dispensing option, then the liner (50) is pulled from the liner dispenser apparatus, and the adhesive tape (53) is advanced through the adhesive tape dispensing apparatus. The lined tape (52) may be dispensed by grasping either the liner or the adhesive tape.
