Abstract (en)

[origin: WO9315981A2] Known vehicles for the disposal of waste materials have a collecting container arranged on the vehicle behind the driver's cab and provided at its end on the driver's cab side with a filling opening, as well as a pair of swivelling arms provided with a carrying and tilting device that picks up at least one waste container positioned in front of the front side of the vehicle, moves the picked-up waste container over the driver's cab and empties it in the area of the filling opening of the collecting container behind the driver's cab. The known vehicles require however a great working height, which precisely is often not available in communal waste disposal. To improve such vehicles, a carrier (39) is arranged on the vehicle and the pair (25) of swivelling arms is secured to the carrier (39) with its pivot (26) in the upper front area of the driver's cab (1).
