Abstract (en)

[origin: WO9511826A1] On the basis of individual control signals, an electro-pneumatic actuator (A1) on the vehicle (F) ensures the point of impact and the readiness for coupling of the vehicle (F). The actuation power is provided by a compressed air tank (E1) on the vehicle (F); the control signals and the auxiliary power for controlling the valve (V1) of pneumatically operated adjusters are preferably transmitted inductively.
