Abstract (en)
[origin: EP0726039A2] The press stud consists of a ball part (1) and a moulded plastics part fitted into it, on either side of a fabric. Each plastics part has a contact flange (2a), and a shaft (2b) to fit into the ball part. The outer surface of each shaft is adapted to the inner contour of the ball part, and projects from it via the flange. The rivet connecting the ball parts is formed as a hollow rivet with two open ends. The rivet passes through rivet holes in the shafts, each of which has a shoulder for a rivet head (3c) formed during riveting.
