Abstract (en)

[origin: EP0726206A1] The container (1) has a base (4) and at least three pillars (6a, 6b, 6c) which rise more or less perpendicularly from the base and are located round its edge. The pillars are hollow, open at one end and diverging towards the point where they join the base, allowing them to fit one inside the other. At the lower end of each pillar there is a hinged flap (38) which covers the lower end of the pillar for stacking the containers one on top of another, and exposes the open end of the pillar when the containers are stacked one inside the other.
