Abstract (en)

[origin: EP0726586A2] The switch has a housing (7) for an electrical device with a motor powered by a removable power pack (3). The housing carries contacts (10,10') for connection to counter contacts (11,11') on the inserted power pack. The housing has a centring or guide device near the contacts which interacts with a corresp. centring or guide device on the power pack when the latter is inserted so that the counter contacts are guide positionally correctly wrt. the contacts. The guide device can be protrusions (13,14) of the same length as the contacts.
