Abstract (en)

[origin: DE4244787A1] A device for displacing cutting-knife strips on a cutting cylinder for the transverse cutting of a paper web stream for non-collect production and collect production is intended to be of compact design and simple to operate. This is achieved in that the cutting-knife strips have, on their bottom surface, slots extending at an acute angle, in which studs engage which are in turn movable in the axial direction by means of a drive, with the result that the cutting-knife strips move in the peripheral direction on the cutting cylinder.
