Abstract (en)  
[origin: EP0727200A1] Apparatus and method for sterile docking two or more plastic bag units 110. The invention generally includes a sterilizable pouch 102 manufactured from an essentially vapor transmission resistant material. Contained within the pouch 102 is at least one plastic bag unit 110 and a predetermined amount of sterile tubing 108 connected thereto. The pouch 102 includes an aperture 104 in one wall or at one seam through which a tube fitting 106 protrudes. The tube fitting 106 has an internal diameter sufficient to permit passage therethrough of the tubing 108 contained within the pouch 102 and connected to the bag unit 110 contained therein. The protruding tubing 108 then may be used for docking with other bag units 110. <IMAGE>
