Abstract (en)  
[origin: EP0727328A2] The front (6) which is parallel to the back (1) of the box can tilt forward. When tilted forward the front is subjected to restoring force produced by elastic bands (10a,10b) or strings joining the front to the back directly or indirectly. The elastic bands lead over the outsides of the back and front and grip the front at at least two places positioned at different distances from the base (2). The box has two sides (3a,3b) attached to the side edges of the back and base. The front forms part of an insert (5) comprising an inner base (7) resting on the base and next to the bottom edge of the front portion. The box has two sides (8a,8b) attached to the side edges of the front portion.
