Abstract (en)  
The roof tile has at least in the lower drainage area (2) a coating (3) of scattered metal particles (4,4") which are set in the tile surface to protrude slightly to form a grater effect. The particles are made of broken-up short copper chips. The coating can be provided on the underside (5) in the overlapping area of the tiles. Openings (6) in the lower area of the tile have a metal particle coating on their inner circumferential surface.

Abstract (de)  
Zur Schaffung einer Dachplatte mit gleichmäßigem Aussehen und hoher Effektivität bei der Verhinderung von Moos- oder Flechtenbewuchs einer Dacheindeckung wird vorgeschlagen, daß die Dachplatte (1) zumindest in dem in Wasserabflußrichtung unteren Bereich (2) eine in die Ziegeloberfläche eingebrachte Metallpartikel-Beschichtung (3) aufweist, wobei kurzgebrochene Kupferspäne in die noch weiche, ungebrannte Ziegeloberfläche aufgestreut werden. <IMAGE>
