Abstract (en)

[origin: DE19505218C1] The support holder for the gas nozzle (3), electrode (2) and/or flame sensor (1) is a single U-shaped spring plate (5) whose centre web (6) is fixed on a frame and whose two arms (13,14,15) have opposing openings (9,10,11,16,17,18) for passing through at least two of the components (1,2,3). Each of the cylindrical components has a stop collar (22,23,24) for support against one arm after passing through the opening in the other arm. One arm is divided into at least two tongues (13,14,15) and at least one tongue is angled away from the centre web by an angle other than 90 deg. so that the edge of the through opening adjoining the component resiliently tensions the component with the support holder (5).
