Abstract (en)
[origin: EP0727802A2] The device has an electromagnet fastened in a housing (1). It also has a spool body (7) fastened in the housing (1). The spool body (7) carries at least one magnet coil (17) and has a spool connection piece extending in only one direction. The spool body (17) is arranged to be inserted in two positions in the housing (1) 180 degrees offset from the winding axis of the magnet coil (17). Preferably both the housing (1) and the spool body (7) are provided with inter-engaging locating parts (12). The latter are effective at points interacting with the 180 degrees offset points of the spool body (7).
