Abstract (en)

[origin: WO9608342A1] The specific utensil for the disassembly and the assembly of oleodynamic and air gaskets according to the present invention consists of a straight body (1) with a handle (2), provided, at the front terminal, with a tapering obtained with two opposite inclined and converging planes (3 and 4), so as to transform the cylindric structure of said body into a laminar shape that has a first curve (5) of about 45 DEG , and a reduced terminal with a second curve (6) in opposite sense, so as to form a means that can be easily inserted in the spaces between the gaskets and the cavities.
