Abstract (en)

[origin: EP0728530A1] A system for paint spraying includes a device to intercept excess wet spray, which includes an air permeable dry filter (4) under continuous motion, with an extractor (6) to suck off intercepted paint particles, after a set drying time has elapsed. Pref. the dry filter is driven by electric motor. The filter is an endless recirculating surface carried on rollers (5). There is an exhaust air duct (9) behind the side of the filter facing the items. When the effluent air plant is switched on, the filter is set in motion.
