Abstract (en)

[origin: EP0728582A2] The cleaning device can move axially parallel in and out of the cylinder to be cleaned. The cleaning device (2), on a floor-level conveyor (8), is moved in and out by a coupled first operating device (12) on two fixed longitudinal guides (11) to a ready position (19) in the cylinder (1). In this position, it can be brought up to and moved away from the cylinder by a second operating device (23). The conveyor has guide rollers (18) and centring rollers (17). The centring rollers correspond to transverse guides (9) fixed to the press mounting.
