Abstract (en)

A container assembly for containing fluids for transportation comprises (a) a flexible container formed from at least one sheet of a flexible material, a container having at least one port through which it can be emptied, the port being covered with a sealing membrane which includes a sealing material extending over at least part of the area of the port, the sealing material being capable of sealing the membrane after penetration by a sampling needle, and (b) a rigid casing in which the flexible container can be located for support, the casing including an opening for the emptying port, located in or towards the base of the casing. <IMAGE>
