Abstract (en)

[origin: EP0728683A1] The device has a drive, coupled to a lifting mechanism, which moves the rubbish bin (2) from its reception position to a position adjacent the rubbish collection container. An engagement device cooperating with a handling position of each rubbish bin is coupled to a sensor system (5), associated with the drive for the lifting mechanism. Pref. each rubbish bin has a handling rail, the sensor system coupled to a detector (8), with a mechanical or optical sensor element (9), detecting the engagement with the handling rail before operation of the drive.
