Abstract (en)

A web of plastic or cardboard material is to be transported through a number of working stations such that cards to be produced from said web are properly aligned in each of the stations. For this purpose, the web is releasably coupled with a carrier tape which is stepwisely moved across the stations, the alignment accuracy being defined by series of equidistant perforations cooperating with sprocket drums. The rotation angle of the drums is predetermined by the number of pulses supplied to stepping motors driving the drums. <IMAGE>
