Abstract (en)

A mold (10, 20, 30) is disclosed for drying a wet preformed pulp molding (M) which is pressed between the mold (10) and a receiving mold (1). The drying mold effectively transmits heat supplied by a heat supply device (19, 22, 29) to the wet preformed pulp molding (M). The drying mold (10) has a chamber (15). The inside wall of the chamber is covered with a thermal insulant (18) to effectively transmit the heat to the preformed pulp molding (M). <IMAGE>
