Abstract (en)  
[origin: EP0728883A1] The horizontally displaceable wedge plate (14) supports the anchor body (4) in a vertical alignment. The wedge plate has an inclinedly rising wedge slot (15), through which the screw (7) extends. The wedge plate is so fitted in the anchor body that guide components of the anchor body engage over a guide profile (16,17) of it and the wedge plate cannot be released backwards out of the anchor body. The wedge plate has upper and lower edge strips inclinedly edged to the anchor body, which forms the guide profile and are guided in opposed guide grooves (18,19) of the anchor body.
