Abstract (en)

[origin: EP0728992A2] The device has a sealing plug (3), with an external thread (4) which fits into an internal thread in an opening in a radiator, or in a pipe which is connected to it, in order to make a permanent connection. It also has a sealing element (5), which can be moved axially in order to block or release the flow of a heating fluid, into or out of the radiator. An operating element (11) can be applied to the sealing element, using a detachable connector (10). The sealing element acts against a projection or nozzle (13), which has an external thread (14) which fits into an internal thread (15) in the plug or the connector. The projection or nozzle is connected to the sealing element, the operating element, and / or the connector.
