Abstract (en)
[origin: WO9513909A1] Apparatus for coating pipes with concrete comprises a concrete coating station (1), a plurality of mobile pipe carriers (4) having means (8, 9) for facilitating rotation of a pipe supported thereon, and means (11, 12) for sequentially advancing said pipe carriers in continual succession past the concrete coating station to convey pipes to and from said station for the purposes of applying a concrete coating thereto, the whole operation of the apparatus repeating in an essentially uninterrupted cycle which provides the advantage that the concrete coating station may be operated continually.
