Abstract (en)

[origin: EP0729723A1] The protrusion (8) extends along part at least of the edge (3), and can be formed by a rib integral with it. Alternatively it can consist of a bar following the edge outline and held clear of it by two or more feet. Part of it can curve upwards to form a hand grip. The comfort-increasing component (5) can fit over the edge of the bath or the protrusion. It may be held by a claw-shaped recess (9) formed in it, and at which suction cups are provided, bearing against the bath surface.
