Abstract (en)
The thrust unit consists of a supporting plate (15) which is able to move transversely relative to the lengthwise axis of the ski, surmounted by a thrust plate (16) which can rotate relative to the supporting plate about the lengthwise axis (46), performing a limited movement. The supporting plate can turn about a vertical pivot (23) and is returned to its central position by a spring (31). It is mounted on top of a base plate (13) which has an upper surface film (20) with a low friction coefficient and is attached to the top of the ski.

Abstract (fr)
L'invention se rapporte à un dispositif d'appui (6) d'une chaussure (2) sur une planche telle qu'un ski (3). Une plaque de support (15) mobile en translation selon une direction transversale du ski (3) est surmontée d'une plaque d'appui (16) de la chaussure (2) mobile en rotation autour d'un axe longitudinal (46) par rapport à la plaque de support (15). Une construction inverse est possible, le but étant de combiner un déplacement en translation avec un déplacement en rotation. <IMAGE>
