Abstract (en)

[origin: EP0730074A2] The fitting (5) has a bolt which can be moved in a longitudinal groove on the secondary door of a pair of doors. The head of the bolt can project from a corner of the door, when in a locking position. The bolt is guided in a housing (6) in the groove, and the housing has a perpendicular mounting limb (29), which can be connected positively to it, in order to provide additional fastening for the bolt. The limb may also be able to move relative to the housing in the direction in which the bolt extends.
