Abstract (en)

The invention relates to a lighting armature provided with a box-shaped housing comprising an upper plate, side walls extending transversely to said upper plate, at least one light source disposed within said box and a reflector disposed within said box and extending in the longitudinal direction thereof. The reflector is substantially curved when seen in cross-sectional view. Seen in cross-sectional view, the reflector is furthermore provided with a few reflecting parts, which are interconnected at their ends by connecting parts, which are screened from direct incidence of light from the light source(s) by the reflecting parts.
