Abstract (en)

[origin: US5828285A] A pre-assembled holder (11) for a bimetallic switching device (12) in a temperature-dependent switch (10) comprises a supporting part (13) made of an electrically insulating material and two electrically conductive contact parts (14, 15) which are fastened to the supporting part (13) before the switching device (12) is inserted. The holding ends (24, 25) of the two electrically conductive contact parts (14, 15) protrude beyond the supporting part (13) and are designed to bear and clamp the switching device (12) between them outside the supporting part (13). An insulating cap (31) can be placed over the holding ends (24, 25) after the switching device (12) has been inserted (FIG. 1).
