Abstract (en)

[origin: EP0730329A1] The device includes a sleeve (G) for fitting electrical equipment into the building which consists of a column (C) which is parallelepiped shaped comprising at least two compartments (10,11) juxtaposed in the sense of the depth of the column. The first compartment (10) is divided into at least two channels (12,13) through which cables (6) pass. Cables carrying large currents may be separated from those carrying small currents in the different compartments offered by the column. Switches and other components, such as the consumer panel (2) may be mounted on the front of the column to be encased by a front cover (30) fitting on to the column. Access doors (23) are provided where necessary in this front panel.
