Abstract (en)

[origin: EP0730374A2] A television receiver has an input circuit for receiving broadcast TV signals, an interface (12) for interfacing user's instruction, a first tuner (1) for generating a first picture signal selected from the broadcast TV signals from the receiving means in response to the user's instruction from the interface (12), a second tuner (2) for generating a second picture signal from the broadcast TV signals from the receiving means in response to the user's instruction from the interface (12), a display (11) for displaying pictures corresponding to the picture signals from the first and second tuners, a multi-screen processor (6) for providing at least two parallel screens on the display (11) each being capable of simultaneously displaying the picture signals from the first and second tuners (1,2), a multi-window processor (8) responsive to the picture signal from the second tuner (2) for providing a multi-window view capable of presenting a plurality of pictures responsive to the broadcast TV signals on the display (11), in either of a single-screen mode or a multi-screen mode based on an instruction from the interface (12), whereby a user is able to perform a channel-search operation to select a desired channel picture signal, and a controller (9) responsive to the completion of the channel-search operation for automatically returning to the original screen mode view before the channel-search operation and providing the selected channel picture signal to the display (11). <IMAGE>
